

Each and every page will be having a navbar and a footer (I'll be making that). If you're working on something that has integration with some other page, you can talk to the person who's doing the other part in order to make things more integrable. We're working as a team together so reach out to each other if you'd like to discuss stuff.

One more thing, since you're a developer, explore with the ideas given here and come up with something of your own.

1. Home Page (Public: Common) : Aman Raj

- **Search bar** (text input bar with a search icon on the left side, with a toggle on right side with)
- **Grid-based icons/ category selection** (button with a small icon)
- High rated freelancers on the right side (use cards with picture, with the prime role in bold, top 3 technologies , ratings and hire button)
- **General Landing page on left side** (covers 2/3rd width, person working on it should decide on the content being displayed here)

2. Employer dashboard (Employer): Abhishek Anand

- **Left panel** (has options to pick from like Job listing section, Currently being worked on, previously worked with section, transaction history section, profile settings etc. Btw these are going to be on the right side) (covers 1/3rd width)
- **Job listing section** (Jobs in card format with picture, with the prime role in bold, top 3 technologies being used in that particular role, on the left side, people applied section with just number displayed on the card, and a see more button)
The see more button leads to a separate page with all the job details, a job should have with the option to set the milestones. This page is completely customizable according to the person working on this particular page (You can discuss with me or any other team member at any point though). It must have an edit button which gives a warning that editing the Job listing will result in removal and relisting.
- **Previously Worked Section** (Freelancer card with Profile pic and name, Top 3 skills, Ratings, Worked on: Project Name, Rehire button)
- **Current Jobs** (shows the current Job listing with some more details about the Job and the person working on it listed with a chat button which leads to chat section, along with a see more button which leads to a new page which shows milestones and the option to mark as finished and this new page should have a raise a complaint button at the top right in red)
- **Profile Settings section**(Current details shows current profile in a card format with an Edit Button, which is disabled when a person is working on the project. Edit button will give a warning that it'll cancel all the current ongoing hiring. Security & privacy shows an option to change password. Subscription shows Your current subscription plan with Upgrade button and all the benefits listed below)

3. Freelancer dashboard (Freelancer):Vanya Awasthi

- **Left panel** (has options to pick from like Active Jobs, Job History, Profile, Payments. Btw these are going to be on the right side) (covers 1/3rd width)
- **Active jobs section** (has job cards with milestone finished bar, this page is also customizable as per the dev, you decide what happens on the next page after clicking on see more button, or if you don't even want a button and just want to show all the details in the card format itself. It should have a chat button though, along with a raise complaint button)

- **Job History section** (Company card with Profile pic and name, Top 3 skills, Ratings, Worked on: Project Name, Chat button)
- **Profile Settings section** (Current details shows current profile in a card format with an Edit Button, which is disabled when a person is working on the project. Security & privacy shows an option to change password. Your skills badges section has an option to give an MCQ test for various languages which gives 5 levels on the basis of level of tests passed. Designer is free to work on it as they want. Obviously it needs a new page for them to give that test, so there's a separate page and developer assigned for that specific page, contact him/her if you'd want things to be personalised according to you. Subscription shows Your current subscription plan with Upgrade button and all the benefits listed below)

4. Admin dashboard (Admin) : jayanth

- **Left panel** (has options to pick from like Job listings, Freelancers, Employers, Complaints, Settings etc. Btw these are going to be on the right side) (covers 1/3rd width)
- **Job listing section** (Jobs in card format with all the details, and the option to delete or drop them)
- **Freelancers section** (with all the freelancers listed there, with their ratings and with option to chat with them or delete their account)
- **Employers section** (with all the Employers listed there, with their ratings and with option to chat with them or delete their account)
- **Complaints section** (with the menu to resolve disputes or two buttons to directly talk to the employer or the freelancer, here you can also click on change ratings button on both the ends)

5. Job Listings Page (Public) :Deepak Anuragi

- **Left panel** (covering 1/3rd width, has options for applying filters like descending salary, stars, newest first, etc dev has to decide what more options to add. Next you can pick skills from the list to land you a job)
- **Right panel** (this is the main panel containing all the information about a particular job in short. It should be having a card that covers the complete 2/3rd width, consisting
 - Job Title (e.g., "Full Stack Developer Needed for E-commerce Site") – Bold and prominent.
 - Employer Name (optional for companies who want to stay anonymous).
 - Skill Match Percentage – Highlights how well the freelancer's profile matches the job requirements.
 - Budget Range – Example: Rs500 - Rs1,000.
 - Project Duration – Short-term or long-term.
 - Posted Date – How long ago the job was posted.
 - Number of Applicants – Displays how many freelancers have already applied.
 - "View Details" Button – Clicking this opens a dedicated Job Details Page.)
 (all of this should have proper styling)

Developer working on this can customize it acc to their will.

- **"View Details" button page:** (should contain Job title & Employer details, like employer name, company profile, employer ratings and reviews, full job description, along with timeline and milestones defined, payment terms, specific software required and prior experience. It'll be having a Apply button, and a chat with the Employer. Rest details can be customized by the developer.

6. Chat page (Public):

So, I'll be making this page. And I'll link it to every other dashboard, so no worries.
